

**Process Heating Solutions Worldwide**

## **Steam Injection Liquid Heating System**

### **BX Heater for Slurries and Waste Fluids**

#### **Benefits**

The unique design of the Pick BX Heater offers key advantages over other high-velocity venturi devices.

- Low Pressure Drop - Process fluid flows through the heater without obstruction. This results in negligible pressure drop when handling high viscosity formulations.
- Low Noise- Noise generation is significantly lower and pipe vibration virtually eliminated.

#### **Features**

- 7 standard models with steam capacity up to 15,000 lb/h. Larger sizes available with custom fabrication. Consult factory.
- Available in 316 stainless steel or carbon steel, other materials or special alloys on request
- Complete instrumentation available
- Over 75 years of experience in design, installation and service of steam injection heating systems

#### **Applications:**

- Starch Slurries
- Mash Cooking
- Waste Grease and Oil
- Waste Water
- Other Slurries or Viscous Liquids
